speaking with today?");
        String name = scan.nextLine();
        System.out.println("Hello " + name);
        System.out.println("How are you today?");
        scan.nextLine();
        System.out.println("I am doing well, thank you! How's the weather today?");
        String s = scan.nextLine();
        if (s.equalsIgnoreCase("cold")) { // why is it not recognizing
"cold"? //UPDATE!! it's was because my String s = scan.nextLine(); wasn't in
the correct line. I moved it to
            System.out.println("You'd better bundle up");
//right below the print statement and it works just fine.
        } else {
            System.out.println("Stay cool");
        }
        int hanger = rand.nextInt(6);
        System.out.println("Here's your shirt.\n" + hanger);
        System.out.println("Oh by the way, are you riding your Harley today?");
    }
}

```

```
String ride = scan.nextLine();
    if (ride.equalsIgnoreCase("yes")) {
        System.out.println("alright!!\n" + hvid[randVid]); //it is currently
selecting an index and I want it to return a clickable video link
                                                    //maybe add a println??
//UPDATE!! I had just + randVid but need to add +hvid[randVid]
    } else {
        System.out.println("Chicken");
    }

    scan.close();

}

}
```
